

ZSEC

ZSEC protocol is the world's first E-commerce project combining yield farming, staking with deflationary components in a DeFi ecosystem.

ZSEC Protocol consolidate the absolute best features of a decentralised finance E-commerce protocol, expanding its own unique features that bring the best experience for a users when utilizing decentralised finance marketplace.

Core Features

An E-commerce project with a DeFi integration

ZSEC protocol is a DeFi resolution that's on purpose to present where so many other projects have crashed. It's invented to be a project that is a connection between De fiand E-Commerce.

Staking

ZSEC protocol is a decentralised finance (Defi) platform to present a resolution for Defi to entry e-commerce such as shopping staking.

Features :

- Purchasing real world products, collectibles, game skins.
- With inbuilt online wallet for staking our tokens.
- Holding tokens give discount on products.
- P2P gifting.
- To be eligible to market products on our platform, you must hold a given number of tokens, locked for a given duration. However, you get staking benefits for that.
- With time, all products marketed on our platform comes with project barcode. Scanning for originality gifts free coins when we move to our own blockchain.

Buy Back

When the number of tokens in the shopping capital is burned. A farther quantity of tokens will be repurchased from the store. This method renewed over time and will significantly expand the value of ZSEC protocol.

Yield Farming

Users are able to gain ZSEC by supplying liquidity to ZSEC protocol's liquidity pool and utilise the token for platform governance and online shopping.
